

What the invention claimed is:

1. A handy collapsible shopping cart comprising
an elongated base frame bar, said base frame bar
comprising two upright mounting plates arranged in parallel at
5 two opposite sides of a rear end thereof, a mounting frame
transversely disposed at a front end thereof, and two coupling
blocks bilaterally disposed near said upright mounting plates;

an elongated supplementary frame bar coupled to said
base frame bar and longitudinally movable along said base
10 frame bar, said supplementary frame bar comprising a top rack
and a bottom rack disposed at top and bottom sides of a rear end
thereof;

two front bumper members respectively pivoted to the
mounting frame of said base frame bar at two sides;

15 two links bilaterally coupled between said
supplementary frame bar and said front bumper members;

two wheel frame bars respectively pivoted to the
coupling blocks of said base frame bar, said wheel frame bars
each having a top end, a bottom end, a sector gear fixedly
20 provided at the top end and meshed with the bottom rack of said
supplementary frame bar, and a wheel fastened pivotally with
the bottom end; and

a retractable handlebar fastened pivotally with the upright mounting plates of said base frame bar by pivot means, said retractable handle bar having a tooth member fixedly provided at a bottom end thereof and meshed with the top rack
5 of said supplementary frame bar;

wherein said retractable handlebar is turnable relative to said base frame bar to move said supplementary frame bar along said base frame bar between a first position where said retractable handlebar is closely attached to said supplementary
10 frame bar, said wheel frame bars are turned upwardly forwards by the bottom rack of said supplementary frame bar and received to two opposite lateral sides of said base frame bar, and said links are moved with said supplementary frame bar to turn said front bumper members backwardly inwards toward said base
15 frame bar, and a second position where said retractable handlebar, said front bumper members and said wheel frame bars are respectively extended out of said base frame bar and said supplementary frame bar.

2. The handy collapsible shopping cart as claimed in
20 claim 1, further comprising a spring-supported lock pin provided at said retractable handlebar and engageable into a lock hole in said base frame bar and adapted to lock said

retractable handlebar to said base frame bar in said second position' and a release button adapted to unlock said spring-supported lock pin from said lock hole.

3. The handy collapsible shopping cart as claimed in
5 claim 1, wherein said supplementary frame bar comprises two side plates longitudinally disposed at two opposite lateral sides, and a longitudinal coupling groove defined between said side plates and coupled to said base frame bar.

4. The handy collapsible shopping cart as claimed in
10 claim 1, wherein said supplementary frame bar is coupled to said base frame bar by a slip joint, said slip joint comprising a sliding slot longitudinally disposed at said supplementary frame bar on the middle, and a pivot pin inserted through said sliding slot and fixedly fastened to said base frame bar.

15 5. The handy collapsible shopping cart as claimed in claim 1, wherein said base frame bar comprises a foot member fixedly provided at a bottom side of the mounting frame thereof; said front bumper members each have a first end respectively pivoted to the mounting frame of said base frame bar and a
20 second end provided with a pivoted extension block.

6. The handy collapsible shopping cart as claimed in claim 1, wherein said supplementary frame bar comprises two

locating plates bilaterally disposed at a front end thereof; said front bumper members each have a locating hole, which is respectively forced into engagement with the locating plates when said retractable handlebar moved to said second position
5 to collapse the handy collapsible shopping cart.

7. The handy collapsible shopping cart as claimed in claim 1, wherein said links each have a first end respectively pivoted to said supplementary frame bar, and a second end respectively coupled to said front bumper members by a
10 respective slip joint.

8. The handy collapsible shopping cart as claimed in claim 1, further comprising a bag, said bag having a closed bottom side fastened to said front bumper members, and an open top side hung on a hanger at said retractable handlebar and
15 provided with a binding tape formed of hook and loop materials.
